

Client: Group 4 Security -G4S Gurkha
Project: To deliver cycle training to Group 4's Gurkha division
Aims: To ensure officers are competent to Level 1 National Standards
Results: Officers showed outcomes in a very short period of time. By the end of the session officers were pursuing each other using effectively using their newly acquired accelerating technique

Group 4 Security Contract Manager at Kingsnorth Power Station, Dil Limbu, contacted Cycle Training UK to train their G4S Gurkha division. The aim was to ensure that his security team met the UK National Standards of cycling so they could minimise risk and cycle effectively when patrolling the power station.

CTUK went to the power station and trained 24 Gurkha officers over two days, delivering National Standards Level 1 training on site. As well as the usual Level 1 syllabus of bike check and control skill drills, the training was tailored to their requirements with additional Level 1 outcomes such as bunny hopping and accelerating (pursuit) skills.

'The Gurkha officers learnt really quickly and could show outcomes in a very short period of time. Many of the officers had not ridden for decades but by the end of the session were pursuing each other using effectively using their newly acquired accelerating technique. The officers were also talking about riding from their home base to the power station instead of driving.' David Dansky, Lead Instructor

'The training ensured that our officers cycled safely and effectively around the station. The feedback from the participating officers was very constructive and overall improved the cycling competency of the team.' Dil Limbu, Contract Manager G4S Gurkha
